Hi all,

I quite like the idea of a "Writing of Signed Languages" convention. That way everybody who's interested can get a chance to see the whole variety of systems that exist and can also get some information of what each system has been designed for and by whom. I don't think this would be trains and airplanes together... I think it would be a wonderful opportunity to see all the efforts that have been made in different directions, i.e. everyday use, scientific use, etc. but the are still all concerned with the same thing: how do I get movements in space and time on paper? How can this be achieved? What are the merits and shortcomings of respective systems? (Which is, BTW, pretty much what I tried to find out in my MA thesis but just concentrating on SignWritin, HamNoSys, Stokoe-Notation, InterSys and SOSO. And of course, this was just one person's effort - and one person's who doesn't even know all these systems very well..)

So I say: go for it!

Best, Susanne
